Does not apply to this measure

Brief Abstract

DESCRIPTION

This measure is used to assess whether the practice can produce a register of people with schizophrenia, bipolar disorder and other psychoses.

RATIONALE

There are relatively few indicators of the quality of mental health care in relation to the importance of these conditions. This reflects the complexity of mental health problems, and the complex mix of physical, psychological and social issues that present to general practitioners. The indicators included in the Quality and Outcomes Framework (QOF) can therefore only be regarded as providing a partial view on the quality of mental health care.

For many patients with mental health problems, the most important indicators relate to the inter-personal skills of the doctor, the time given in consultations and

the opportunity to discuss a range of management options. Within the 'patient experience' section of the quality framework (see the original measure documentation), there exists the opportunity to focus patient surveys on particular groups of patients. This would be one way in which a practice could look in more detail at the quality of care experienced by people with mental health problems.

Mental health problems are also included in some of the organisational indicators (see the original measure documentation). These include the need for a system to identify and follow up patients who do not attend where the practice has taken on a responsibility for administering regular neuroleptic injections, significant event audits which focus specifically on mental health problems, and methods of addressing the needs of carers.

This measure is one of six [Mental Health](#) measures. The Mental Health indicator set now focuses on patients with serious mental illness and there are indicator sets that focus on people with depression and dementia (see the original measure documentation for details).

The register now includes all people with a diagnosis of schizophrenia, bipolar affective disorder and other psychoses rather than a generic phrase that is open to variations in interpretation. This brings mental health in line with other areas of the QOF.

PRIMARY CLINICAL COMPONENT

Mental health; schizophrenia; bipolar disorder; other psychoses; patient registry

DENOMINATOR DESCRIPTION

This measure applies to practices whose patient population includes individuals with a diagnosis of schizophrenia, bipolar disorder and other psychoses (one practice at a time).

NUMERATOR DESCRIPTION

The practice can produce a register of patients with schizophrenia, bipolar disorder and other psychoses

Evidence Supporting the Measure

EVIDENCE SUPPORTING THE CRITERION OF QUALITY

- A formal consensus procedure involving experts in relevant clinical, methodological, and organizational sciences

Evidence Supporting Need for the Measure

DEVELOPER

British Medical Association
National Health Service (NHS) Confederation

FUNDING SOURCE(S)

The expert panel who developed the indicators were funded by the English Department of Health.

COMPOSITION OF THE GROUP THAT DEVELOPED THE MEASURE

The main indicator development group is based in the National Primary Care Research and Development Centre in the University of Manchester. They are: Professor Helen Lester, NPCRDC, MB, BCH, MD; Dr. Stephen Campbell, NPCRDC, PhD; Dr. Umesh Chauhan, NPCRDC, MB, BS, PhD.

Others involved in the development of individual indicators are: Professor Richard Hobbs, Dr. Richard McManus, Professor Jonathan Mant, Dr. Graham Martin, Professor Richard Baker, Dr. Keri Thomas, Professor Tony Kendrick, Professor Brendan Delaney, Professor Simon De Lusignan, Dr. Jonathan Graffy, Dr. Henry

Smithson, Professor Sue Wilson, Professor Claire Goodman, Dr. Terry O'Neill, Dr. Philippa Matthews, Dr. Simon Griffin, Professor Eileen Kaner.

FINANCIAL DISCLOSURES/OTHER POTENTIAL CONFLICTS OF INTEREST

None for the main indicator development group.
